Do you have what it takes to win? Clone Drone in the Danger Zone is a murder-mercy challenge involving a player-controlled drone with a mind of its own, trying to survive the hostile robots and dangerous environment without getting too close to the edges. Features: A unique gameplay experience with rogue-like elements. Tons of dangerous and devious enemies with relentless pestering AI. Many different scenarios and environments. Unique gameplay features. Clone Drone in the Danger Zone is a unique blend of roguelike voxel slicing and roguelike gladiatorial combat. The primary gameplay objective of the game is to survive as long as possible while trying to avoid the edges of the map as much as possible, to avoid losing one or more limbs. The gameplay is similar to the rogue-like role playing game, Algier, in that you don't have a permanent inventory, but instead, the AI's actions and reactions are programmed, and you can place items such as drones, torches, medipacks, ammo and other things to help you survive longer. The game can be played in two modes: match mode and free roam. In the match mode, you can choose to play an AI controlled drone, or a player controlled drone. In free roam mode, you can play as either a drone or a player and explore the map of the game at your own pace. In the match mode, the AI controls the drone, while the player controls a bloodied robotic body. During the matches, you have a limited amount of time to slice off one or more parts of your robotic body (lives). The player can lose a life by doing something wrong, such as using a weapon or dropping a drone, or if a part of his or her body is chopped off by one of the enemies. If the player loses all their lives, the game ends. The game has a very simple and easy to understand rule set. The main objective of the game is to survive. The goal of the game is to have a high score, which is a combination of how long the player survives and how many of his or her limbs survive. The player can opt to have their drone always on, or on "auto" mode, in which case the drone will fly towards the nearest enemy. On the other hand, the player can "hack" the drone's programming to manually control where the 82157476af
